can aural training in music enhance your sound discrimination abilities for languages the study  
sets off to answer this question by testing 50 german speaking students of non linguistic degrees  
for their abilities to discriminate between sounds in finnish a language previously entirely  
unknown to them 25 randomly selected subjects then went through an aural training in music for  
two weeks before all the subjects were retested in their aural perceptive abilities in the finnish  
language by means of a similar test containing different test items the hypothesised positive effect  
of the musical intervention could be partially proved by a statistically significant mean  
enhancement in the final scores achieved by the trained group compared to an insignificant  
enhancement achieved by the control group
